Software Testing Assignment

Module:-1

1. **What is SDLC ?**
   - SDLC (Software Development Life Cycle) is a step-by-step process to develop software.
   - It includes planning, design, coding, testing, deployment, and maintenance.

2. **What is Software Testing ?**
   - Software testing is the process of checking software for bugs and errors.
   - Software Testing is a process to identify the correctness, completeness, and quality of developed computer software.

3. **What is Agile Methodology ?**
   - Agile is a development approach where software is built in small parts.
   - It focuses on quick delivery, teamwork, and continuous feedback.

4. **What is SRS ?**
   - SRS (Software Requirement Specification) is a document that describes software requirements and features.
   - It tells developers what the system should do.

5. **What is OOPS ?**
   - OOPS :- Object-Oriented Programming System
   - OOPS is a programming concept where software is built using objects and classes.

6. **Write Basic Concepts of OOPS ?**
   - The basic concepts of Oops are as follows:
     - Class
     - Object
     - Encapsulation
     - Inheritance
     - Polymorphism
     - Abstraction

7. **What is Object ?**
   - An object programming is a real-world thing which have data(properties) and action(methods).
   - Example: Car, Student, Mobile.

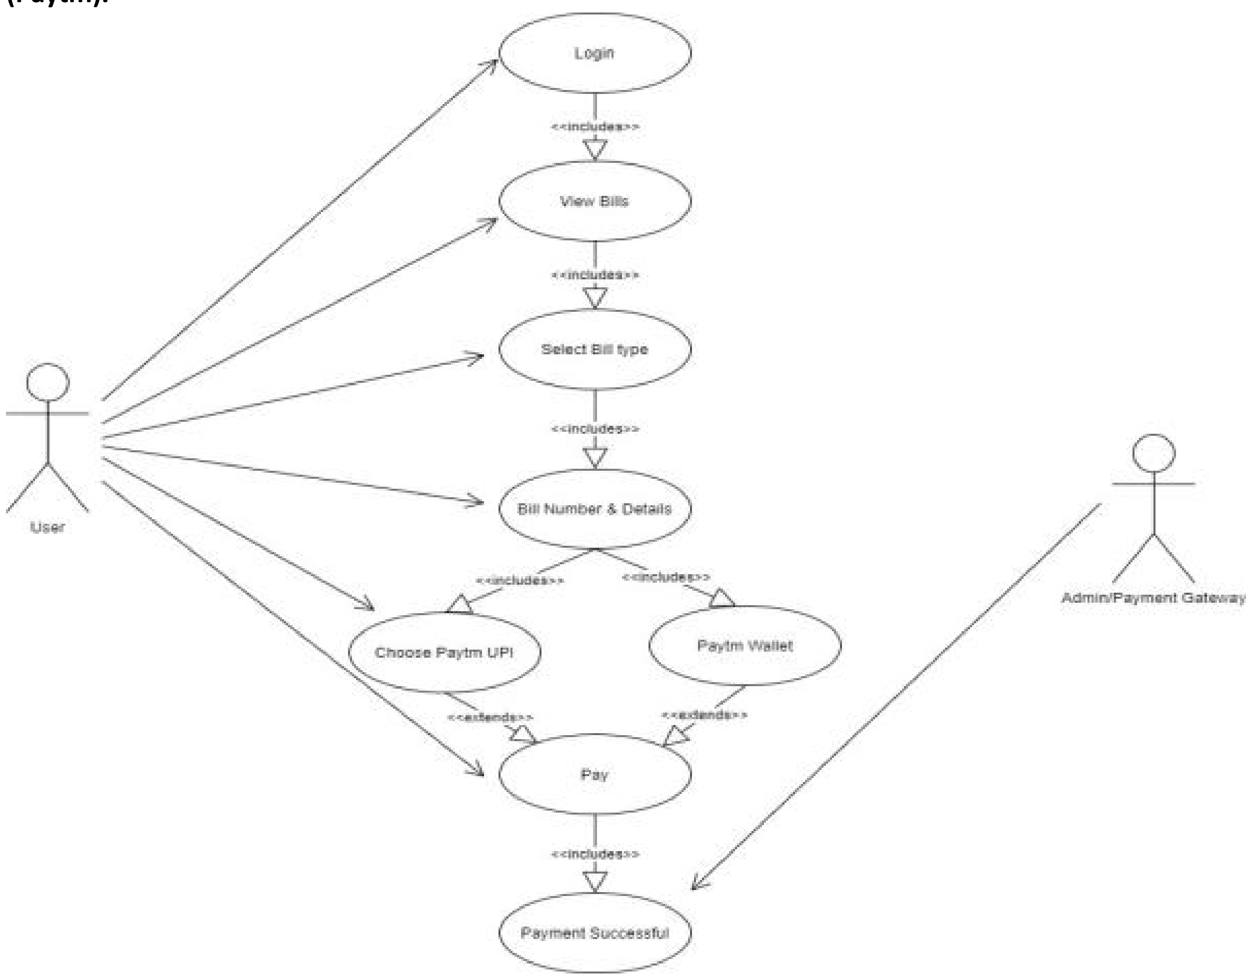
8. **What is Class ?**
   - A class is a blueprint/template used to create objects.
   - Example: Car design is a class.

9. **What is Encapsulation ?**
   - Encapsulation means wrapping data and methods into one unit.
   - It also hides data for security.

10. **What is Inheritance ?**
    - Inheritance allows one class to use properties of another class.
    - It helps in code reuse.

11. **What is Polymorphism ?**
    - Polymorphism means one function can work in many forms.
    - Example: same method name, different behaviour.

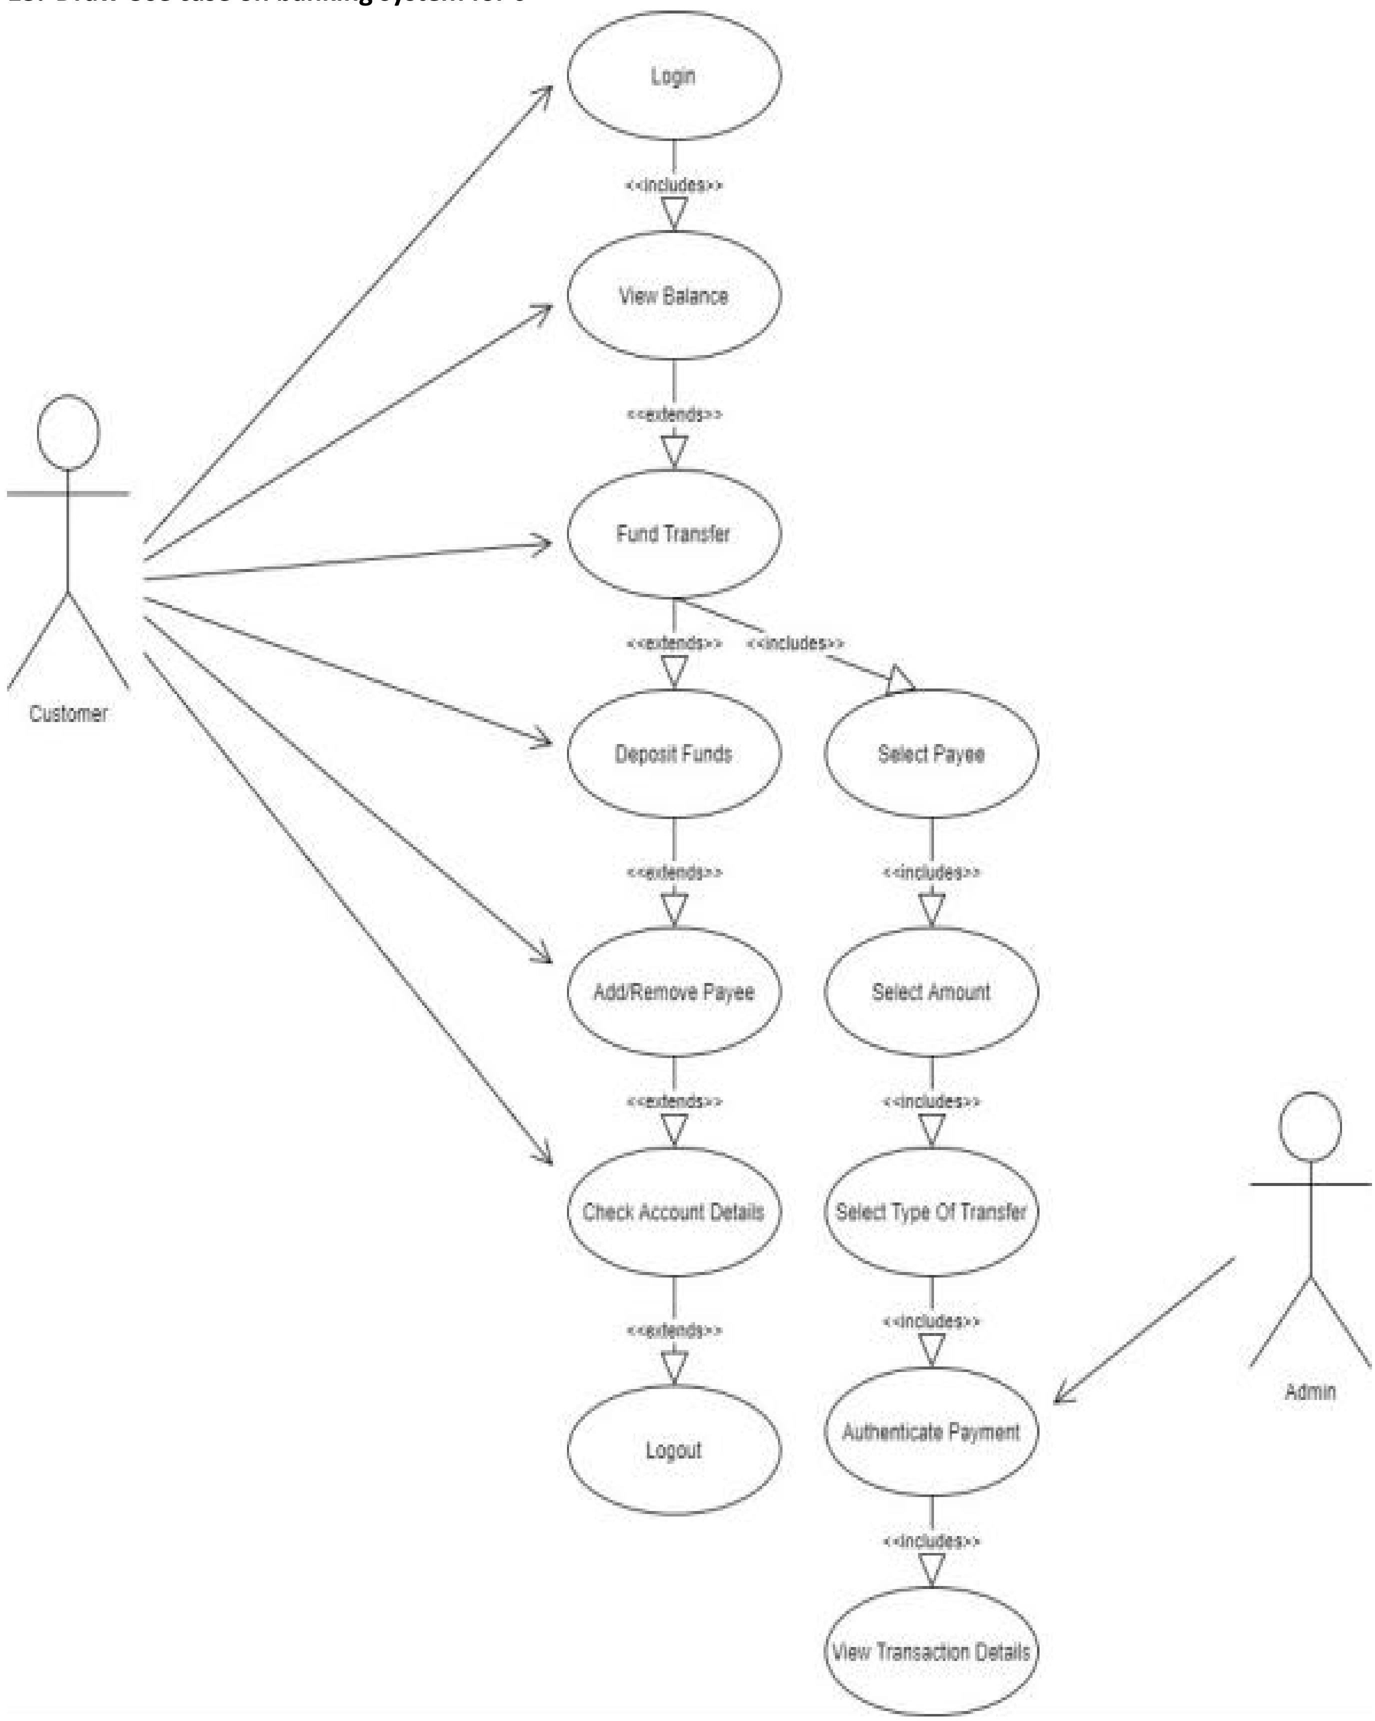
12. **Draw use case on online bill payment system (Paytm).**



Software Testing Assignment

Module:-1

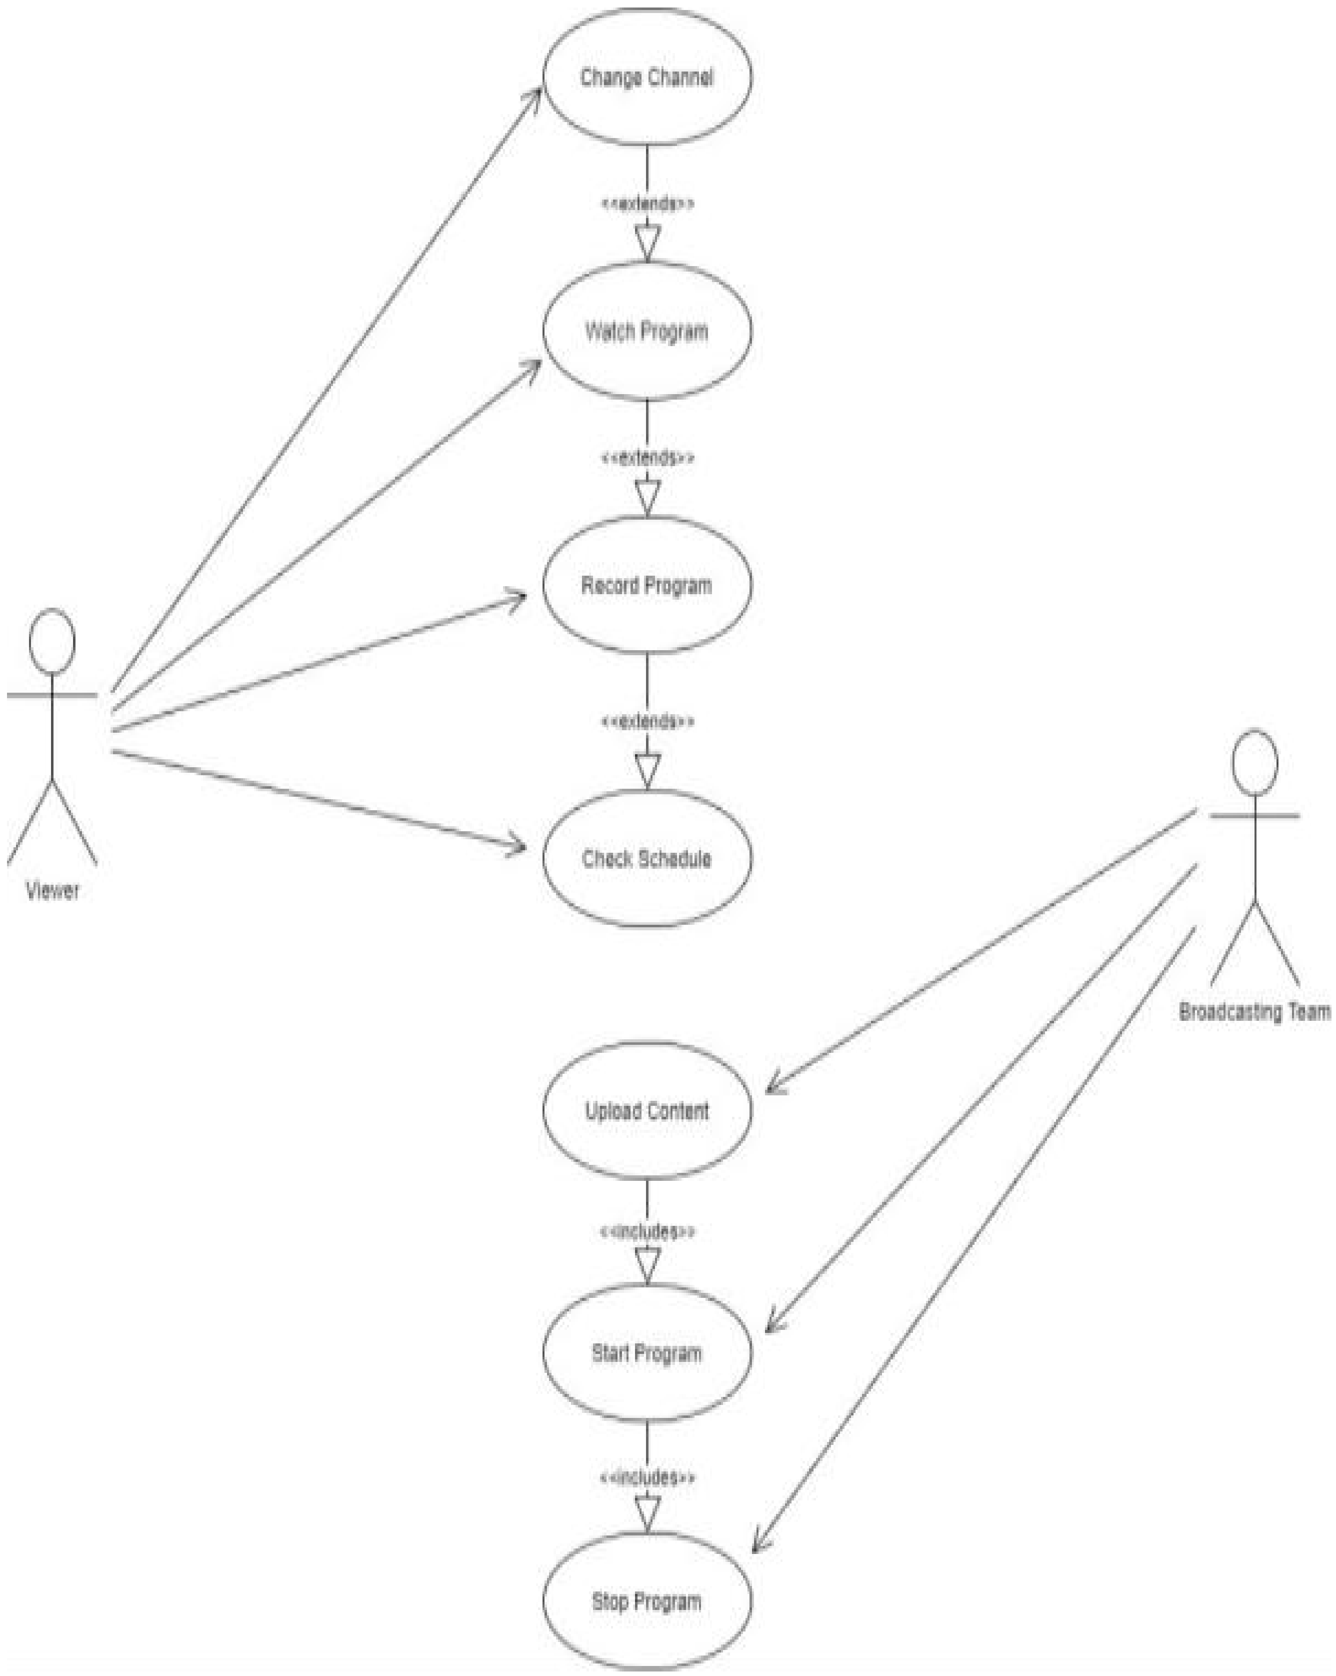
13. Draw Use case on banking system for c



Software Testing Assignment

Module:-1

14. Draw Use case on Broadcasting system.



Software Testing Assignment

Module:-1

15. Write SDLC Phases with Basic Introduction.

- SDLC (Software Development Life Cycle) is a systematic process used to develop high-quality software in a structured way.
- It includes phases such as
  1) Requirement
  2) Analysis
  3) System Design
  4) Development
  5) Testing
  6) Deployment
  7) Maintenance
- These phases ensure the software is reliable, efficient, and meets user requirements.

16. Explain phases of the Waterfall Model.

- The Waterfall model is a linear and sequential software development model where each phase must be completed before the next begins.
- Its phases are Requirement Analysis, Design, Implementation, Testing, Deployment, and Maintenance.
- It is simple to understand but difficult to change once development starts.

17. Write Phases of spiral model.

- The Spiral model is a risk-driven software development process that combines iterative development with systematic risk analysis.
- Its main phases are
  1) Planning
  2) Risk Analysis
  3) Engineering (development & testing)
  4) Evaluation.
- These phases repeat in cycles until the final product is completed.

18. Write Agile Manifesto Principles.

1) Customer satisfaction through early delivery of software
2) Welcome changing requirements
3) Deliver working software frequently
4) Developers and business people must work together daily
5) Working software is the primary measure of progress
6) Maintain a sustainable development pace
7) Simplicity is important
8) Regularly reflect and improve the process

Software Testing Assignment

Module:-1

19. Explain working methodology of agile model and also write pros and cons.

- Agile divides the project into small parts called sprints.
- Each sprint includes planning, coding, testing, and customer feedback to improve the product continuously.

  - Pros of Agile Model

  - ✓ Flexible — easy to change requirements
  - ✓ Client involvement throughout development
  - ✓ Early delivery of working software
  - ✓ Faster bug detection
  - ✓ Better product quality
  - ✓ Team communication improves

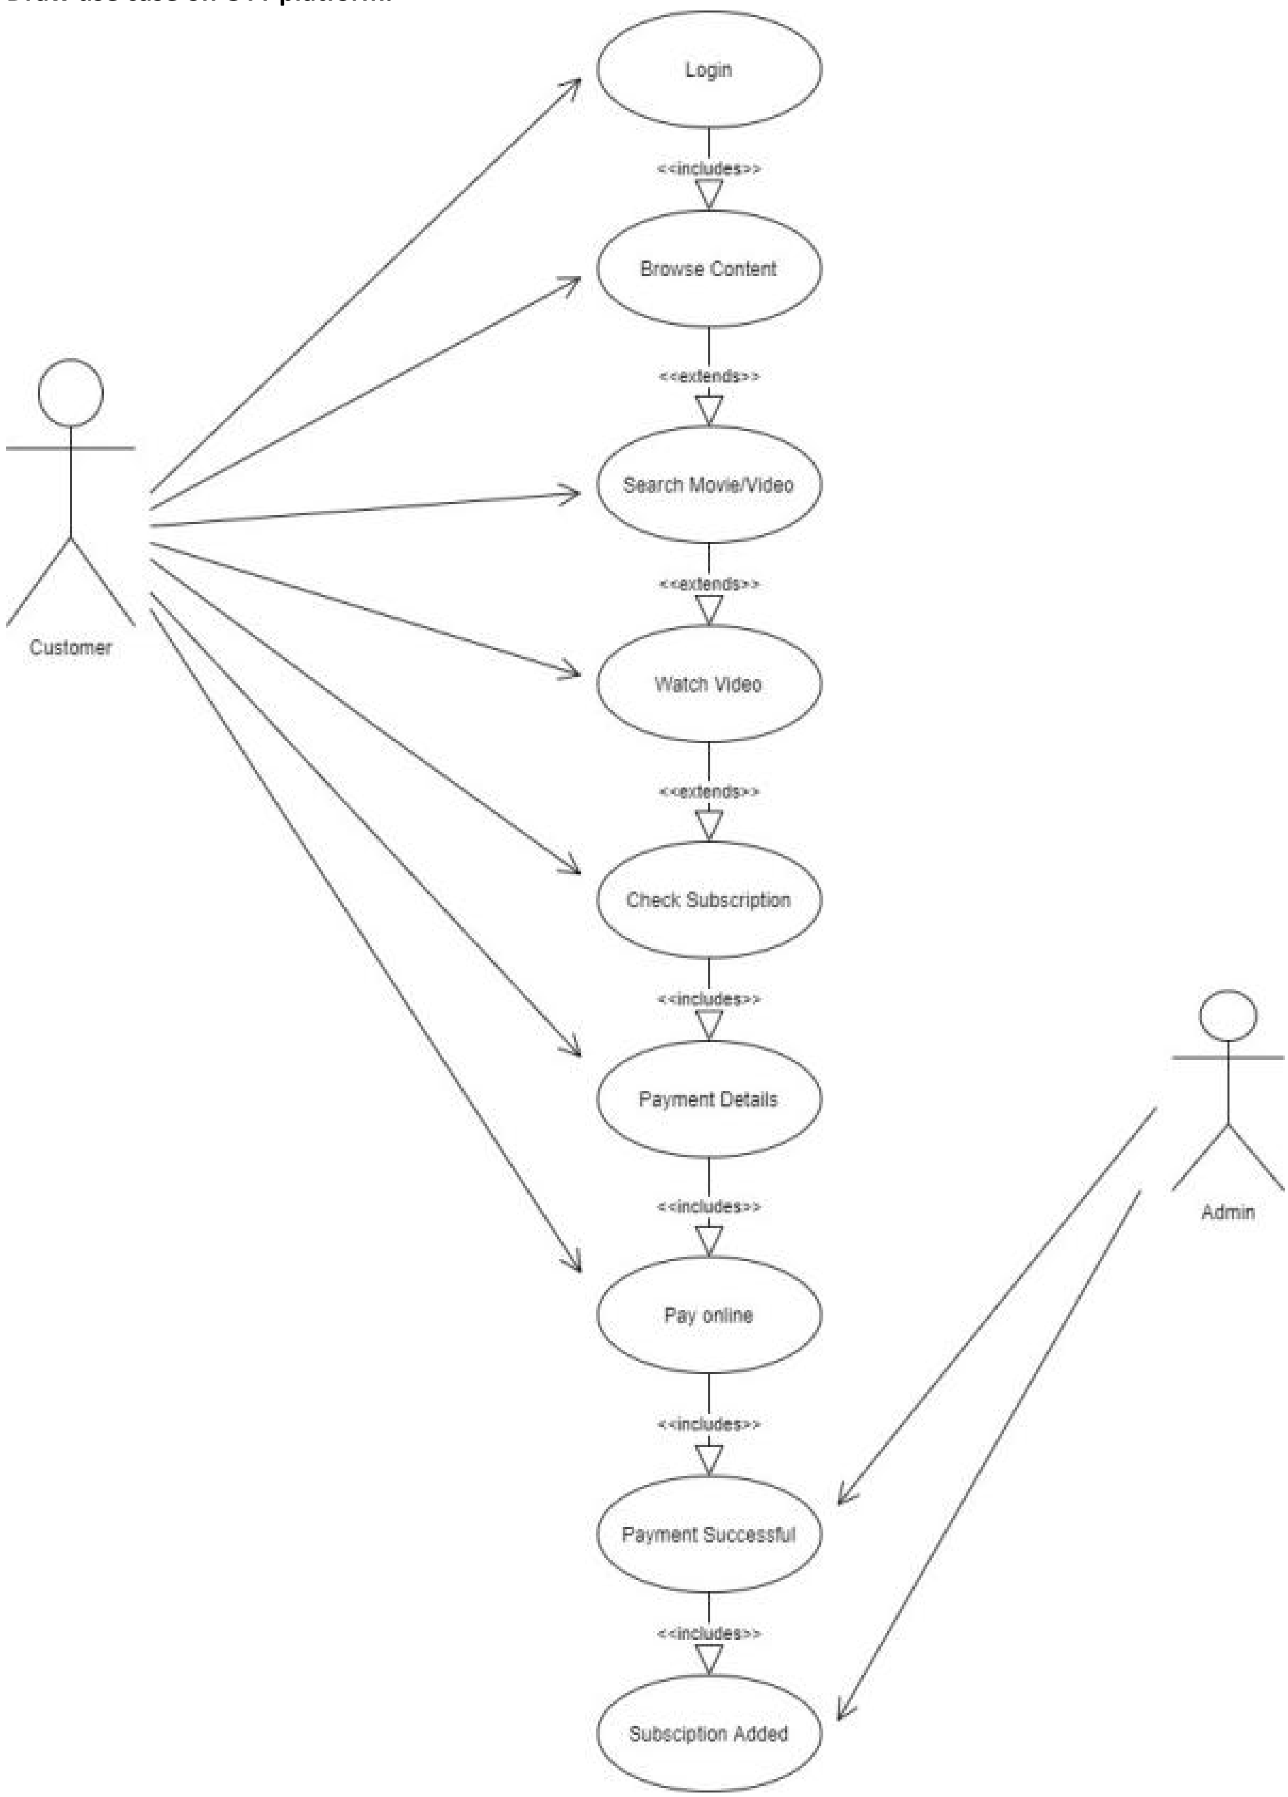
  - Cons of Agile Model

  - Hard to predict final cost & time
  - Needs experienced team members
  - Continuous client involvement required
  - Documentation may be less
  - Not suitable for very large fixed-scope projects

Software Testing Assignment

Module:-1

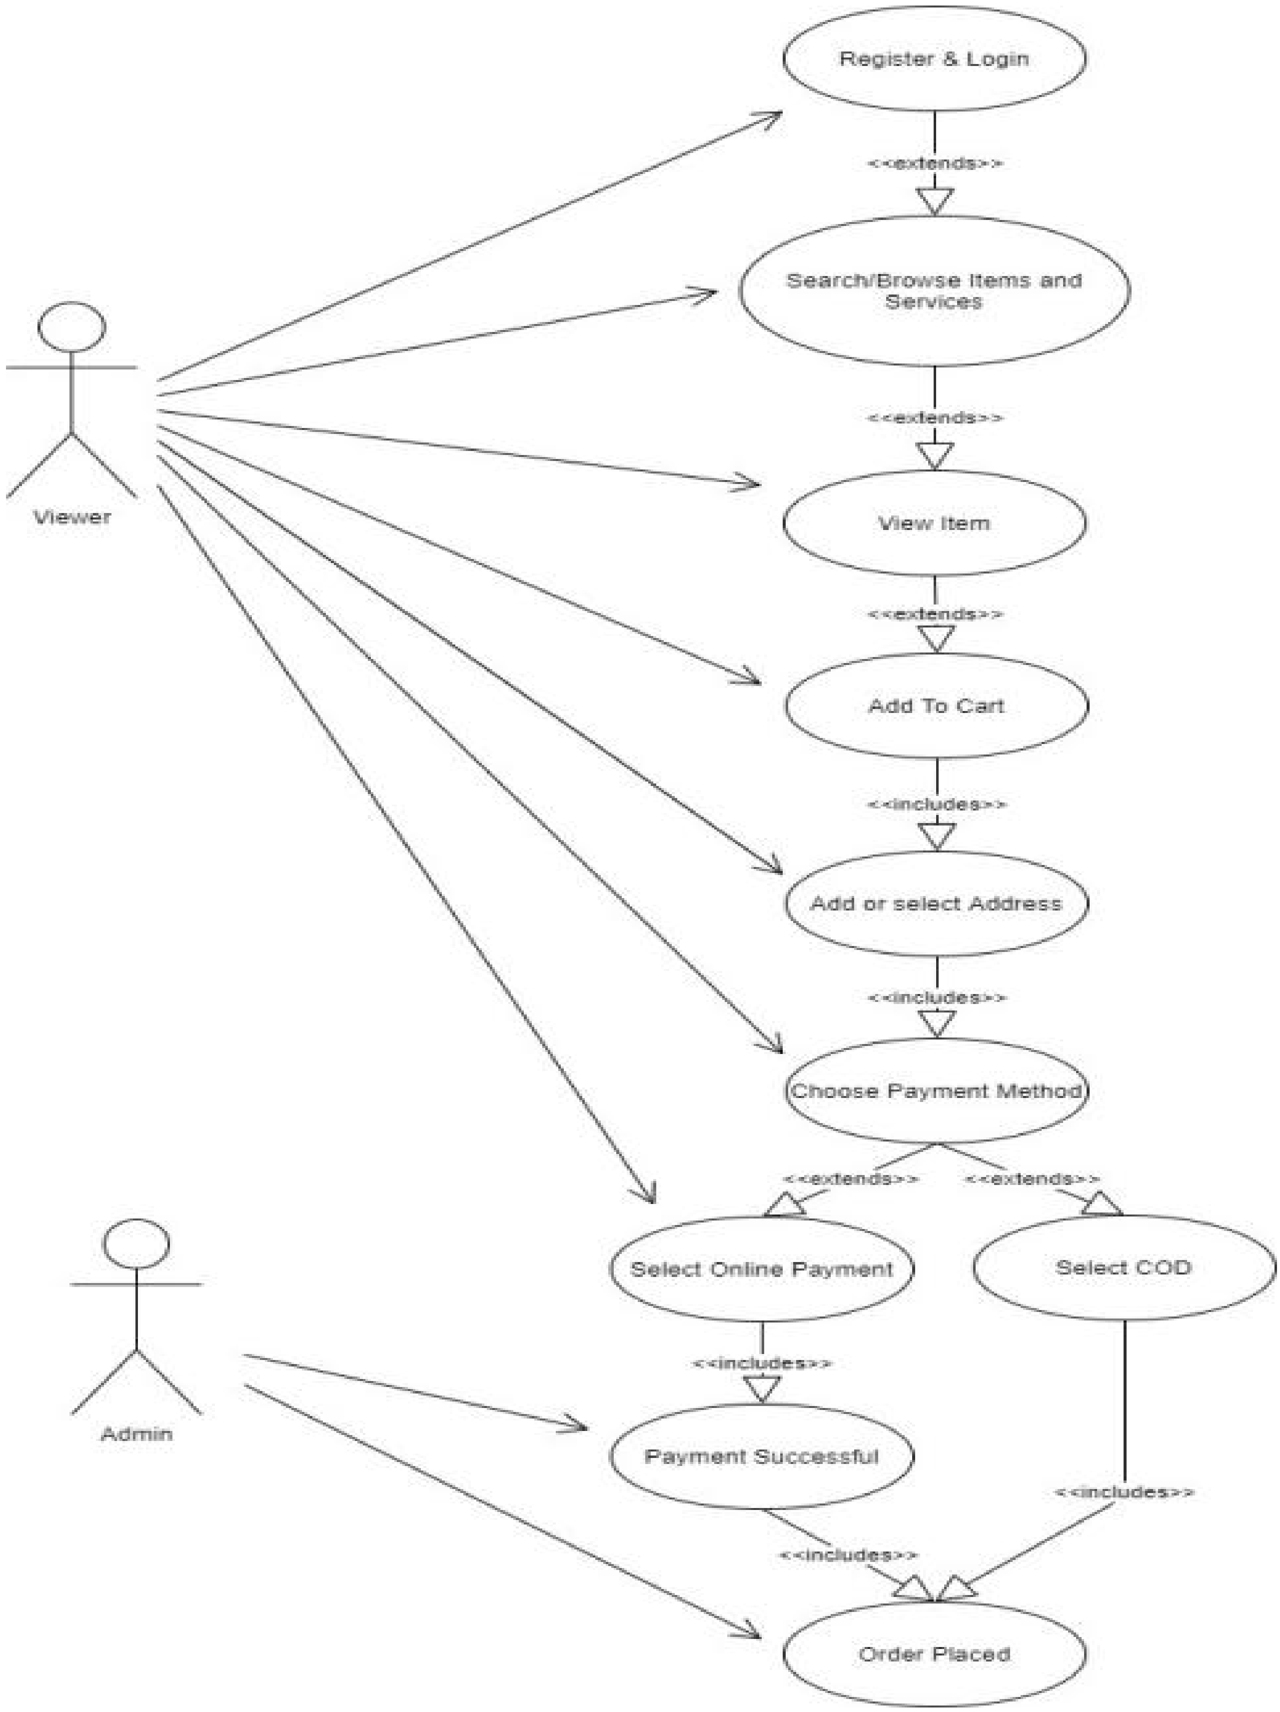
20. Draw use case on OTT platform.



Software Testing Assignment

Module:-1

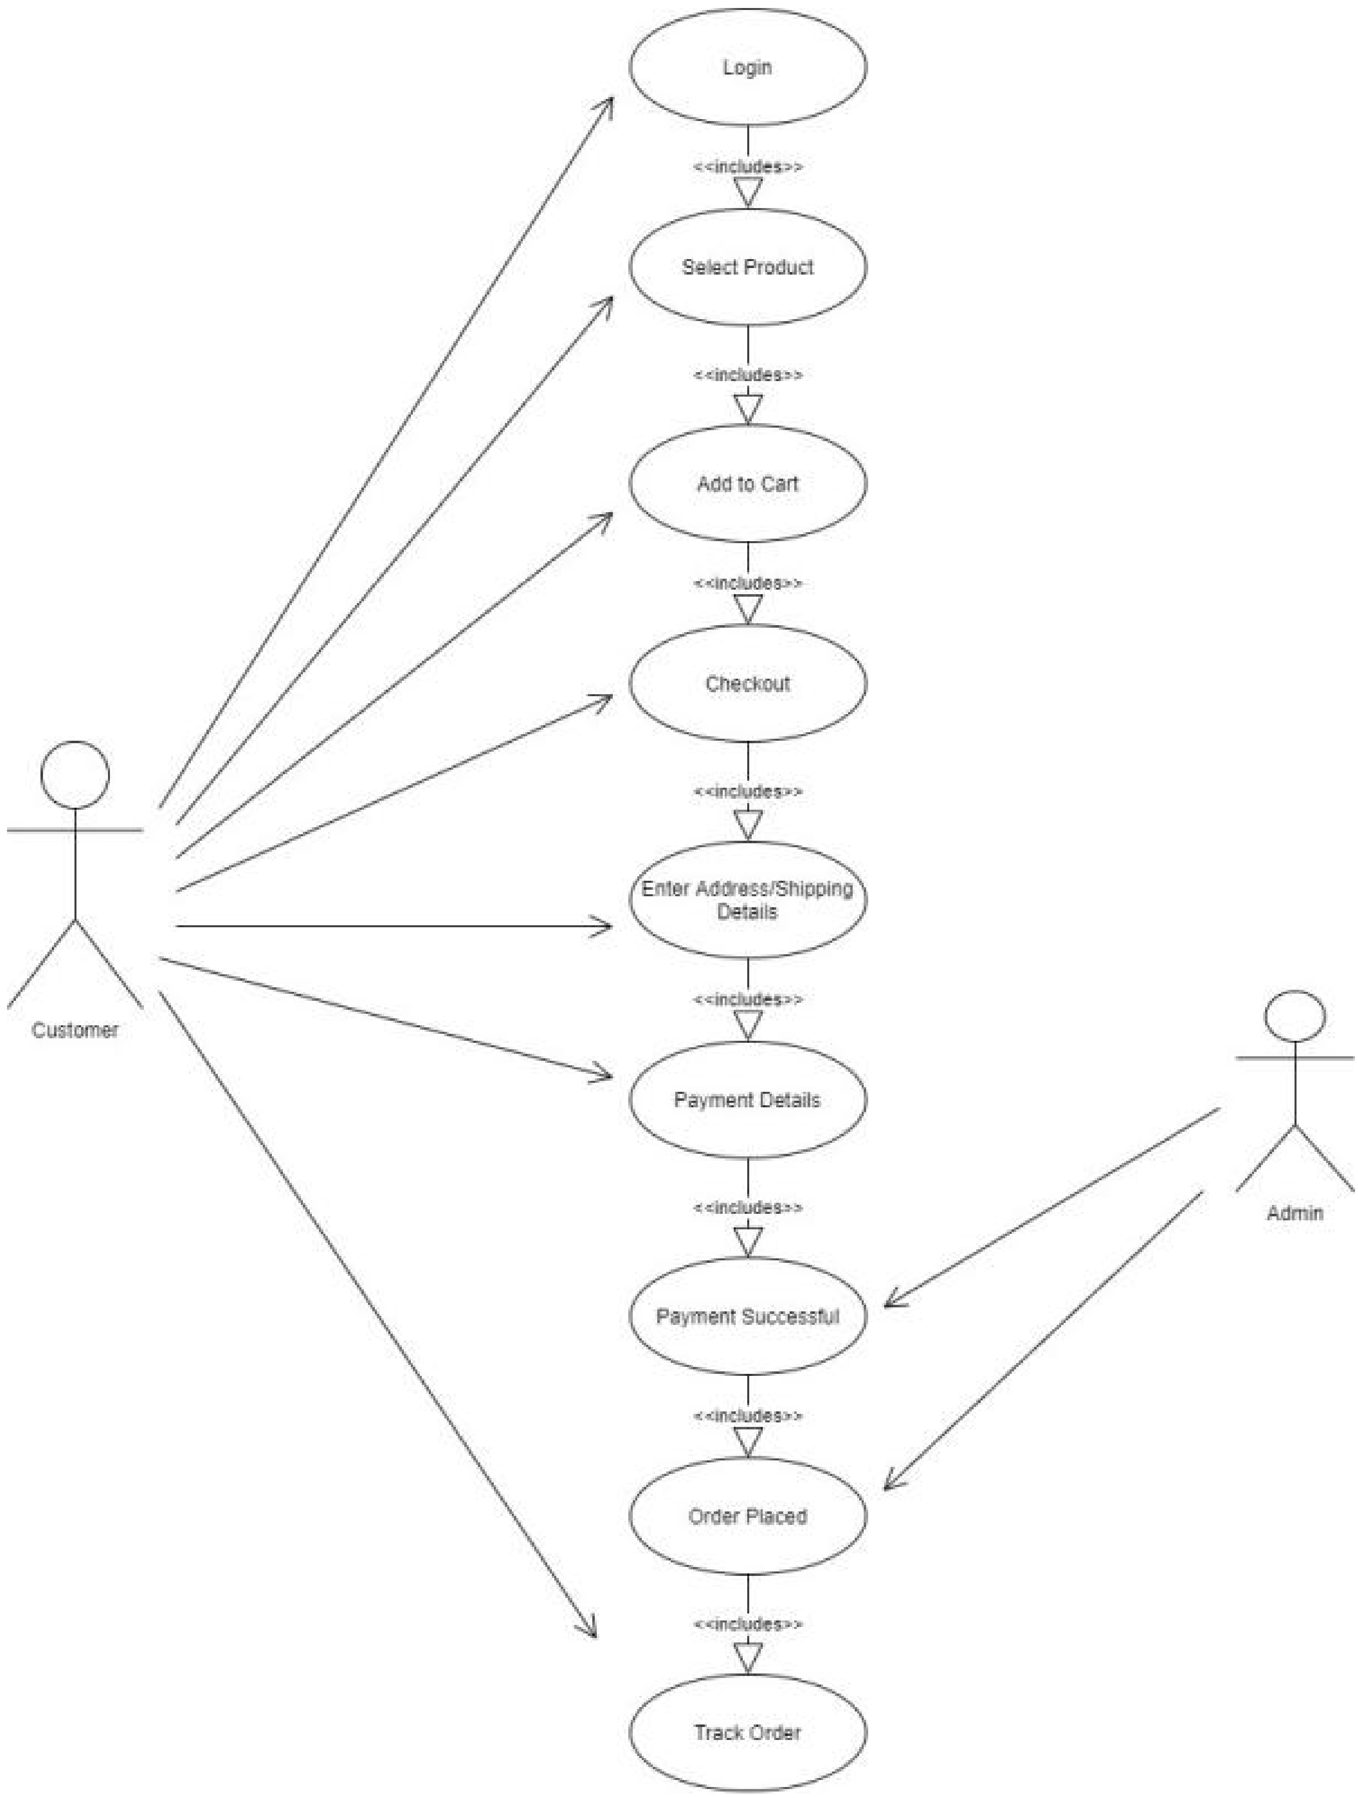
21. Draw use case on E-commerce application



Software Testing Assignment

Module:-1

22. Draw use case on Online shopping product using payment gateway.



Software Testing Assignment

Module:-1
